

Silicon Valley Clean Water Fluent ERP project has kicked off on Cogsdale Cloud

Redwood City, CA and Toronto, ON, February 2018 – Cogsdale is working with Silicon Valley Clean Water (SVCW) on their Fluent project to replace their legacy ERP system. SVCW sought a qualified firm with the expertise, experience, and qualifications to provide a fully integrated, proven, state-of-the-art Enterprise Resource Planning (ERP) solution along with the professional services to complete the implementation.

“We decided to replace our legacy system because we believe Cogsdale’s system provides both the financial and asset management solution we need.” states Matt Anderson, Chief Financial Officer, Silicon Valley Clean Water. He continues, “Over the past five years, SVCW has invested heavily in process automation that improves operation awareness and control. Having a single platform with Cogsdale will augment/support this investment. It’s core functionality meets our immediate operational needs, and it has the business intelligence to separately draw from outside sources.”

SVCW has named their project “Fluent”. SVCW deals with influent and effluent water on a daily basis, “fluent” represents a bridge of those processes from beginning to end. It also conveys the idea of something that is effortless and flowing. A fluent finance system should provide the information users need efficiently, concisely, and promptly.

Casey Dowd, Director of New Name Sales with Cogsdale, is pleased that Silicon Valley Clean Water chose Cogsdale’s Cloud solution for their Fluent ERP project. “Cogsdale Cloud is an ideal solution for SVCW.” he states, “with guaranteed uptimes and disaster recovery, SVCW’s IT staff will have less worry about the health of the system and environment. All that will be managed by Cogsdale”. Cogsdale Cloud is deployed using Microsoft Azure. Implementation and post go-live support for the software as well as the environment is conducted by Cogsdale.
